Each system was reviewed and listed as separate P25 system or combined with other P25 systems using the following criteria:

- Systems counted as a unique system if they used frequencies that were not part of another system within the state, county, city or township. This included federal agencies and military within the state.
- Public Safety systems that combined to include included fire, law enforcement and public works counted as one system with one dispatch.
- If a system had a separate dispatch then it was listed separately as a fire dispatch, law enforcement or Public works system.
- Federal agencies had several systems in some states. These systems were considered separate systems if they used different frequency assignments within the federal frequency bands and had a separate dispatch.
- There are only two USFS forests that are digital. The BLM and US Forest Service law enforcement use P25 digital with encryption but this does not constitute a P25 system except where noted.
